

FC-161ANE-Gen 3-Desktop Electric Pad Printer

(Cam-Driven Type / running cliché single-color ink cup)

- The running cliché design reduces movement and vibration of the ink cup, helping to maintain ink consistency.
- The pad holder now adds up/down adjustment in addition to the original left/right adjustment. This allows fine-tuning based on artwork position, improving printing accuracy.
- The dwell time after ink pickup can be freely set. Combined with adjustable triangular base and pad holder, it enables more even ink transfer and improves efficiency when handling inks with different drying speeds.
- Precise motion and high stability, reducing vibration during operation and improving print quality.
- Speed is adjusted via rotary knob. Simple and intuitive interface with flexible speed settings.
- Plug and play. No air connection or compressor needed—very power-efficient!
- The steel plate moves, while the pad and workpiece remain stationary. This effectively avoids misalignment and improves printing stability.
- High-precision control for smoother motion.
- Plug and play. Energy-saving and environmentally friendly, reducing power usage by about 80%.
- Stops the machine immediately when approached, with a flashing indicator light. Dwell time can be adjusted.
- Modify dwell seconds based on ink type (slow-drying or fast-drying).
- Supports one or two prints per cycle, increasing ink thickness and opacity.

Model	Color	Steel Plate (mm)	Printing Area (mm)	Dimension (cm)
